

Vermont's Guide to Fluoride Levels in Public Water Systems 2021 Edition

This booklet provides information on the fluoride status in public water systems in Vermont's cities and towns water supply. It is designed to assist local public health professionals, dental and medical professionals, and the public to make informed decisions about their oral health.

Virtually all water, including ground, surface, and sea water has fluoride, but the level is usually less than the optimal amount to help prevent tooth decay. Community water fluoridation is the precise adjustment of natural fluoride levels to 0.70 mg/L; the optimal level to prevent tooth decay recommended by the Department of Health and Human Services (HHS) in 2011.

Americans have access to more sources of fluoride than they did when water fluoridation was first introduced in the United States in the 1940s, including dental products such as toothpaste and mouth rinses, prescription fluoride supplements, and fluoride applied by dental or medical professionals. Water fluoridation and fluoride toothpaste are largely responsible for the significant decline in tooth decay in the U.S. over the past several decades. However, tooth decay is still a very common, chronic, preventable disease that affects all ages. Untreated tooth decay impacts employment, social development, self-esteem, and overall quality of life.

To learn more about Fluoride in Vermont, visit the Health Department Fluoride webpage:
<http://www.healthvermont.gov/wellness/oral-health/fluoride>

About Vermont’s Public Water Systems

A public water supply is considered a public water system if it has a minimum of 15 service connections used by year-round residents or regularly serves at least 25 year-round residents. Examples include towns and cities, homeowners’ associations, hospitals, fire districts, mobile home parks, nursing homes, etc.

There is a total of 465 public water systems serving 379,697 Vermont residents; 29 systems adjust their fluoride level, serving 136,977 people; 41 consecutive systems buy their water from the 29 systems which serve 76,060 people and there are 5 systems that have natural fluoride levels which serve 466 people; 361 systems do not adjust their fluoride levels and serve 161,122 people (Table 1). Of the Vermont residents served by a public water system, 56% are receiving fluoridated water.

Table 1: Public Water Systems in Vermont Identified as Fluoridated and Non-Fluoridated (2020)		
	Number of Systems	Population Served By System
All Water Systems	465	379,697
Fluoridated		
Adjusted	29	136,977
Natural	5	466
Consecutive	41	76,060
Total	72	213,504
Non-Fluoridated		
Non-Adjusted	361	161,122
Consecutive	29	5,071
Total	394	166,193

Adjusted: A water system that adds fluoride to achieve optimal fluoride level of 0.70 mg/L. (Community Water Fluoridation).

Natural: A water system that has a natural fluoride concentration at or above 0.60 mg/L. No fluoride is added to the system.

Non-Adjusted: A water system that has a natural fluoride level at or below 0.59 mg/L. No fluoride is added.

Consecutive: A water system that purchases water from another water system. The consecutive water system has a water plant but does little or no treatment to the water. These water systems are optimally fluoridated if the original (i.e., parent) system is optimally fluoridated. No additional fluoride is added to the consecutive system.

Multi-Source: A water system that receives water from numerous sources. It may get water from two or three other water systems and provide some water itself through its own wells. The fluoridation status depends on the fluoridation status of the different water systems. No additional fluoride is added. If a water system does not fluoridate, the fluoride level must be tested at least once every 3 to 9 years according to testing requirements by the Environmental Protection Agency (EPA) and the Vermont Department of Environmental Conservation (DEC).

Community Water Fluoridation Systems

The following table lists the water systems that participate in Community Water Fluoridation, and the year it was initiated in that system.

Water System	Initiation Year
Alburgh Village	2014
Barre City & Barre Town	1968
Bellows Falls	1968
Bradford Village	1971
Burlington	1953
Champlain Water District (comprised of 8 members communities)	1973
Enosburg Falls	1976
Hinesburg	2000
Ludlow Village	1996
Middlebury	1972
Montpelier & Berlin	1972
Morrisville	1970
Newbury Village	1987
Newport City	1969
Northfield	1976
Norwich	1971
Orleans Village	1969
Poultney	1978
Proctor	1963
Randolph Village	1998
Richmond	1983
Rutland City & 4 Rutland Systems	1983
Springfield	1976
St. Albans City	1983
St. Johnsbury	1983
Swanton Village	1969
Underhill	1973
Vergennes	1973
Edward Farrar Utility District	1968

How to Use this Booklet:

Each public water system is listed in the booklet by town in alphabetical order, the population served, and the average fluoride level for 2021. Communities with fluoride levels at **0.30** parts per million (ppm) and above are **bolded** in the table (starts page 7). This booklet is updated every three years.

The Medical and Dental HealthCare Providers responsibilities are to:

- ✓ Determine the existing fluoride content in the families' primary source of water prior to prescribing fluoride supplements.
- ✓ Consider the water source for infants and children in daycare facilities and schools prior to prescribing supplements.
- ✓ Use this booklet to locate their town, then the water system name.
- ✓ Go to the fluoride level column where the fluoride levels will be found in parts per million (ppm). **Bolded** are the systems with fluoride levels equal to or greater than **0.30 ppm**. This will alert you to reference the dietary fluoride supplement below prior to prescribing fluoride supplements.
- ✓ Refer to the Dietary Fluoride Supplement Schedule for prescription guidelines.
- ✓ For families whose water supply is not located in this booklet, i.e. wells or small systems (under 15 connections or 25 yearly residents) and the fluoride level is unknown, they must test their water prior to obtaining a fluoride supplement prescription (See next page)

Dietary Fluoride Supplement Schedule - 2014

Approved by the American Dental Association,

American Academy of Pediatrics & American Academy of Pediatric Dentistry

Age	Fluoride ion in Drinking water (ppm)		
	Less than 0.30 ppm	0.30-0.60 ppm	Greater than 0.60 ppm
Birth- 6 months	No supplements	No supplements	No supplements
6 months-3 years	0.25 mg/day	No supplements	No supplements
3-6 years	0.50 mg/day	0.25 mg/day	No supplements
6-16 years	1.00 mg/day	0.50 mg/day	No supplements

To obtain the benefits from fluoride supplements, long-term compliance daily is required.

Children should receive:

- **One systemic source**
- **Multiple topical sources, starting at the age of 6 months for maximum effect**

Systemic Sources

- Community Water Fluoridation
- Natural occurring beneficial levels of fluoride in primary drinking source
- Prescription fluoride drops or tablet supplementation

Topical Sources

- Fluoridated toothpaste (a pea size amount for very small children)
- Over the counter fluoride mouth rinse (over the age of 6)
- Fluoride treatments and fluoride varnish in a dental and medical office

Why test a private water supply?

There are geographic areas in Vermont where the naturally occurring fluoride level in the groundwater exceeds the recommended guideline for fluoride of 2.0 parts per million (ppm). The Health Department recommends a reverse osmosis water filtration system to reduce fluoride exposure to a level less than 2.0 ppm in private water supplies that exceed that level.

It is very important that prescriptions are **NOT** written for children who may already be receiving high levels of naturally fluoridated water. The only way to know for sure is to test the well water for its level of natural fluoride **BEFORE** prescriptions for supplements are written.

How to test a private water supply

The Health Department Laboratory will test fluoride in small systems, well water or springs for families with children ages four years or younger for free. Health Department Laboratory will test fluoride for a service-fee for families with children ages five or older. Any other certified laboratory for water analysis can test for fluoride levels in the water too.

How do I get a test kit?

Fluoride in well water order form instructions (form follows on page 7):

- ✓ Section A: Fill in the Physician or Dentist information, mailing and email address
- ✓ Section B: Fill in the Parent/Guardian information, mailing and email address
- ✓ Parents or the office can either mail the prepaid form or fax it directly to the Health Department Laboratory
FAX: 802-338-4706
- ✓ The Health Department Laboratory will send the test kit directly to the parent

For more information on drinking water testing: For more information on drinking water, visit <http://www.healthvermont.gov/environment/drinking-water>

**Vermont Department of Health Laboratory
Fluoride in Well Water Order Form
for families with children under the age of 4**

For questions, please call:
The Office of Oral Health, Vermont Department of Health
802-863-7330 or 866-331-5622

INSTRUCTIONS: Mail or fax (802-338-4706) this form directly from the provider's office to the Vermont Department of Health Laboratory.

Section A - Primary Care Provider information

Section B - Parent/Guardian information

**Section A. To be filled out by the Physician or Dentist who will receive the test result:
(Mailing label or office stamp is acceptable)**

Provider Name: _____
Mailing Address: _____
Town/City: _____ State _____ Zip Code _____
Phone: _____
Email address: _____

Section B. To be filled out by the Parent/Guardian: PLEASE PRINT

Parent Name: _____
Mailing Address: _____
Town/City: _____ State _____ Zip Code _____
Daytime /Cell phone: _____
Email Address: _____
Child's Name: (First & Last) _____

_____ Check here if you would like additional information about Vermont Department of Health drinking water testing recommendations or testing services at the Vermont Department of Health Laboratory.
